Property type	Detached house
Total floor area	144 square metres

Energy rating and score

This property's energy rating is B. It has the potential to be B.

See how to improve this property's energy efficiency.

The graph shows this property's current and potential energy rating.

Properties get a rating from A (best) to G (worst) and a score. The better the rating and score, the lower your energy bills are likely to be.

For properties in Northern Ireland:

- the average energy rating is D • the average energy score is 60

Breakdown of property's energy performance

Features in this property

Features get a rating from very good to very poor, based on how energy efficient they are. Ratings are not based on how well features work or their condition. Assumed ratings are based on the property's age and type. They are used for

features the assessor could not inspect. **Description Feature** Rating

Catale	Description	Rating
Walls	Average thermal transmittance 0.19 W/m²K	Very good
Roof	Average thermal transmittance 0.11 W/m²K	Very good
Floor	Average thermal transmittance 0.17 W/m²K	Very good
Windows	High performance glazing	Very good
Main heating	Boiler and radiators, mains gas	Good
Main heating control	Time and temperature zone control	Very good
Hot water	From main system	Good
Lighting	Low energy lighting in all fixed outlets	Very good
Airtightness	Air permeability 4.5 m³/h.m² (as tested)	Good
Secondary heating	Room heaters, wood logs	N/A

Low and zero carbon energy sources Low and zero carbon energy sources release very little or no CO2. Installing

these sources may help reduce energy bills as well as cutting carbon emissions. The following low or zero carbon energy sources are installed in this property:

Biomass secondary heating

Primary energy use

The primary energy use for this property per year is 93 kilowatt hours per square metre (kWh/m2).

About primary energy use

How this affects your energy bills

An average household would need to spend £671 per year on heating, hot water and lighting in this property. These costs usually make up the majority of your energy bills.

You could $\mathbf{save}\,\mathbf{£0}\,\mathbf{per}\,\mathbf{year}\,\mathbf{if}\,\mathbf{you}\,\mathbf{complete}\,\mathbf{the}\,\mathbf{suggested}\,\mathbf{steps}\,\mathbf{for}$ improving this property's energy rating. This is **based on average costs in 2022** when this EPC was created. People

water and lighting.

living at the property may use different amounts of energy for heating, hot

Impact on the environment This property's environmental impact rating is B. It has the potential to be B.

An average household produces

This property produces

Properties get a rating from A (best) to G (worst) on how much carbon dioxide (CO2) they produce each year.

Carbon emissions

2.3 tonnes of CO2 This property's potential production You could improve this property's CO2 emissions by making the suggested

6 tonnes of CO2

2.3 tonnes of CO2

£3,500 - £5,500

energy use. People living at the property may use different amounts of energy.

These ratings are based on assumptions about average occupancy and

▶ Do I need to follow these steps in order?

Changes you could make

changes. This will help to protect the environment.

Step 1: Solar photovoltaic panels, 2.5 kWp Typical installation cost

Typical yearly saving £351 Potential rating after completing 88 B Help paying for energy improvements You might be able to get a grant from the **Boiler Upgrade Scheme**. This will

help you buy a more efficient, low carbon heating system for this property.

Who to contact about this certificate

can complain to the assessor who created it.
